The Victaulic Vortex Combination Box is a primary component in the Vortex System. The Combination Box is comprised of the essential components that create the Victaulic Vortex mist and control the discharge into the hazard. Each component inside the enclosure is factory installed and tested for operation. One Combination Panel is designed to provide fire suppression for a single hazard.

The Combination Box contains an automated regulating valve (ARV) that is coupled with a pressure transducer to maintain a fixed system pressure as the supply pressure decays. When active, the ARV controls the on/off state of the water release valve and the valve position.

Dependant on system size, an automated ball valve or solenoid will be used to control water flow water to the emitter. Before the water release valve, a mesh strainer is installed to prevent debris from entering the Victaulic Vortex System. Each Combination Box includes a water isolation valve so that the strainer or water release valve can be maintained.

The electrical interface for the system is comprised of clearly labeled, color-coded, push-to-connect terminal blocks. Two white three-connection terminal blocks are provided for the auxiliary power supply and transducer connections. One black four-connection terminal block is provided for the supervisory signals and two additional black terminal blocks are used for coupling the release signal from the FACP to the solenoid on the primary cylinder head.

All necessary plumbing connections are provided on the side or bottom of the enclosure. The drain and Nitrogen supply connection will be threaded and require proper pipe schedules to be used. The inlet and outlet piping and water supply will be grooved to accept Victaulic couplings and is sized to either 1" or 1½" depending upon system design.

# Victaulic Vortex™ Fire Suppression System

## SERIES 951 COMBINATION BOXES FOR USE WITH VICTAULIC VORTEX 1000 AND VICTAULIC VORTEX 1500 FIRE SUPPRESSION SYSTEMS

### ELECTRICAL SPECIFICATIONS

- **Combination Box:** 24VDC continuous power supply (23-27VDC), polarity sensitive
  - **Alarm Current:** 3 Amps
  - **Standby Current:** 125mA
  - **Supervisory Connections:** 500mA @30 VDC resistive load

- **Pressure Transducer:**
  - **Operation Voltage:** 24VDC, polarity sensitive
  - **Output:** 4-20mA (0-50 psi/0-335 kPa, 0-100 psi/0-689 kPa, 0-300 psi/0-2068 kPa)
  - **Connections:** 18 AWG shielded twisted pair

### CONNECTIONS

- **DC Power – TB1**
  - 23-27 VDC operation voltage
  - Supervised by system fault contact

- **Transducer – TB2**
  - Polarity sensitive
  - Uses supply power from TB1
  - Shield connection terminated at panel only
  - Operation and wiring supervised by system fault contact

- **Supervisory – TB3**
  - System fault connection (24V, transducer, PLC fault)
  - Provides the means to signal a system fault to another device
  - Water isolation valve, system fault and manifold charge
  - 500mA @ 30VDC resistive dry contacts
  - Non-latching

- **Release Input – TB4**
  - Termination point from release panel
  - Two connections, Release + and Release -

- **Solenoid Output – TB5**
  - Out to primary head
  - Optional second head connection
  - 22-27 VDC operation voltage
  - 13 Watts
Victaulic Vortex™
Fire Suppression System

SERIES 951 COMBINATION BOXES FOR USE WITH VICTAULIC VORTEX 1000 AND VICTAULIC VORTEX 1500 FIRE SUPPRESSION SYSTEMS

CONTROLS AND INDICATORS

Multifunction Key Switch
- Disables ARV from operating (Primary release circuit shall include a separate disable switch)
- Resets valve after discharge
- Key removal in normal, ready condition
- Closes system fault contact

Red Indicator Light
- Visual indicator shows if the system is in the not ready condition
- Active when system fault contact is closed
- Light is off in normal condition

Water Isolation Valve
- Visual indicator provides status
- Isolated water for strainer maintenance
- Terminated on TB3

Pressure Gauge
- Provides visual indication of manifold pressure
- 0 to 4000 psi/0 to 27579 kPa
- Reference only gauge

Automated Drain Valve
- 24 VDC operation

Options:

Automated Ball Valve
- Directional arrow provides visual indication of status
- Manual operation - push stem in and rotate with wrench

Solenoid
- 24 VDC operation
- 13 Watts

INSTALLATION

Reference should always be made to the applicable I-VORTEX Victaulic Field Installation Handbook for the product you are installing. Handbooks are included with each shipment of Victaulic products for complete installation and assembly data.

WARRANTY

Refer to the Warranty section of the current Price List or contact Victaulic for details.

NOTE

This product shall be manufactured by Victaulic or to Victaulic specifications. All products to be installed in accordance with current Victaulic installation/assembly instructions. Victaulic reserves the right to change product specifications, designs and standard equipment without notice and without incurring obligations.
