FM-200®

FM-200® (HFC-227ea) Clean Agent fire extinguishing systems are the most widely used of all the halocarbon gaseous agents, and is universally accepted as the best agent used to replace Halon 1301.

FM-200® is a chemical agent used primarily in total flooding systems and has been installed in over 200,000 systems worldwide.

FM-200® fire suppression systems protect everything from computer rooms / data centres, telecommunications facilities, and switch gear to military vehicles, high tech medical applications, and pleasure craft to priceless works of art and historic landmarks around the world.

PROINERT™

PROINERT™ is a unique in that it utilises a pressure regulating discharge valve which produces lower discharge pressures which also translates into lower costs all around, resulting in savings with pipe work, venting area and cylinder storage.

PROINERT™ has become widely accepted as the best performing, most cost effective, and environmentally friendly inert gaseous suppression system, offering extended hold times and great flexibility in design.

PROINERT™ is an ideal choice for a wide variety of industries and applications, suitable for facilities such as computer rooms / data centres, telecommunications facilities, and the like.

PROINERT™ is a second generation clean agent gaseous suppression system. Novex 1230™ is a chemical agent used primarily in total flooding systems and is the most environmentally benign of all the chemical agents. Novex 1230™ is used in applications ranging from computer rooms / data centres, telecommunications facilities, switch gear, high tech medical applications, and pleasure craft to priceless works of art and historic landmarks.

Novex 1230™ is truly a real breakthrough in clean agent technology, a liquid at room temperature, it looks, feels and acts like water allowing flexibility in recharge procedures. In particular our higher storage pressure at 34.5 bar (500psi) allows the greatest flexibility for the system design.

CARBON DIOXIDE

Carbon dioxide (CO₂) is a colourless, odourless, electrically non-conductive gas that is highly efficient. CO₂ has been used as an extinguishing agent for more than 80 years and was the first gaseous agent used for fire suppression. It can be used for local application and total flooding systems and is suited to a wide range of applications and hazards. CO₂ has a high rate of expansion enabling rapid fire suppression and provides a heavy blanket of gas that reduces the oxygen level to a point where combustion cannot occur. CO₂ is not approved for occupied spaces unless fitted with a safety interlock device to prevent the system from discharging when the enclosure is occupied. Like all fire protection systems, CO₂ systems should only be designed by experienced engineers. CO₂ can be used to protect applications such as generator sets, turbines, switch gear, flammable liquid baths, electrical enclosures and transformers.

NOVEC 1230™

Novex 1230™ (CF2R8) Fire Protection Fluid is a second generation clean agent gaseous suppression system. Novex 1230™ is a chemical agent used primarily in total flooding systems and is the most environmentally benign of all the chemical agents. Novex 1230™ is used in applications ranging from computer rooms / data centres, telecommunications facilities, switch gear, high tech medical applications, and pleasure craft to priceless works of art and historic landmarks.

Novex 1230™ is a real breakthrough in clean agent technology, a liquid at room temperature, it looks, feels and acts like water allowing flexibility in recharge procedures. In particular our higher storage pressure at 34.5 bar (500psi) allows the greatest flexibility for the system design.

Gaseous Fire Suppression or Clean Agent fire suppression are terms used to describe gases used to extinguish fires. Typically gaseous agents work in one of two ways, the first is to inert the atmosphere reducing oxygen levels to a level that will no longer sustain combustion, the second is to react chemically with the fire absorbing heat and causing the chain reaction of combustion to break down.

Clean Agent fire extinguishing systems are typically used to protect three dimensional enclosures containing high value assets that are vital for business continuity, and assets that cannot be protected by traditional sprinkler systems due to the potential for water damage. Typical examples of system applications include telecommunication facilities, clean rooms, data processing centres and museums.

Regulatory authorities in Australia govern the use of gaseous agents, systems and hardware. Compliant systems are subject to testing and an approval process that takes into account agent importation licenses, pressure vessel approvals, system performance, reliability, human safety, environmental impacts etc. Clean Agent fire suppression products supplied by Fire Protection Technologies are environmentally friendly and cost effective solutions and meet all regulatory authority requirements.

Where easy clean-up, minimal down time, business continuity and people safety are overriding factors, you need to consider clean agent gaseous suppression for your fire protection needs. We will help analyse your facility and operations to determine the most suitable fire suppression agent for your application and your business.

A fire is DEVASTATING! Conventional fire systems provide personal and structural protection. But when it comes to high value assets and irreplaceable items, water can be just as damaging as any fire!
PRODUCTS:

**Gaseous Suppression**
- Inert Gas (IG-01, IG-55, IG-100, IG-541)
- Novec 1230™ Fluid (FK-5-1-12)
- FM-200® / NAF S 227 (HFC-227ea.)
- Ecaro 125° / NAF S 125 (HFC-125)
- Carbon Dioxide (CO₂)
- Hybrid Systems (N₂ / Water)
- Pressure Relief Vents
- Enclosure Integrity Testing Equipment
- Pipe & Fittings

**Water Suppression**
- Water Mist - High Pressure
- Water Mist - Intermediate Pressure
- Water Mist - Low Pressure
- Hybrid Systems (Water / N₂)
- Monitors & Delivery Systems
- High Speed Deluge

**Foam Suppression**
- Foam Concentrates
- Foam Proportioning
- Foam Delivery Systems
- Foam Concentrate Testing

**Explosion Protection**
- Explosion Suppression
- Explosion Isolation
- Explosion Vents & Pressure Relief
- Spark Suppression
- Explosibility Testing

**Fire Detection**
- Linear Heat Detection - Digital
- Linear Heat Detection - Fibre Optic
- Linear Heat Detection - Micro Chip
- Flame Detection
- Video Imaging Detection
- Spark Detection
- Control & Indicating Equipment
- Thermal Imaging Detection
- Aspirating Smoke Detection

**Military & Defence**
- Military Vehicles
- Naval Vessels

**Special Applications**
- Micro Environment
- Oxygen Reduction
- Kitchen Protection Systems
- Dry Chemical
- Vehicle Systems
- Compressed Air Foam
- Marine & Offshore
- Vapour Mitigation

**Support Services**
- Design / Engineering
- Technical Support
- Services & Testing
